

Fig. B1. Plot of atmospheric ^{14}C bomb activity; $\Delta^{14}\text{C}$ (‰) vs. calendar year. Data from Levin and others (1985) represent yearly mean ^{14}C levels measured from tropospheric CO_2 samples taken at mountain stations in Austria and Germany. Data from Burchuladze and others (1989) represent the measured ^{14}C levels in Georgian (eastern Europe) wines prepared from annually grown grapes.
